A Strategic Collaboration For Delta’s Expansion In The Chinese Market

Delta announced its expansion of CO₂ capture and utilization operations in China with a new and exciting Business Development Agreement with the Nanjing Kisen International Engineering Co., Ltd (“KISEN”). This Agreement is a strategic move by Delta and KISEN to further exemplify the demand for Carbon Capture, Utilization, and Storage (CCUS), as well as the accelerate need for robust and proven CO₂ capture technology into the ever-expanding Chinese CO₂ mitigation market.

This collaboration with KISEN provides opportunities for Delta to expand into the cement industry, which is second behind coal-fired power generation in world CO₂ emissions. This Bus. Dev. Agreement will establish Delta and KISEN as leaders in CO₂ capture from cement manufacturing.

“The Signing Of This New Business Development Agreement, Establishes Delta And KISEN As Strong, Long-term Collaborators Moving Forward In This Important Industry And Will Facilitate The Creation Of Global Leadership In Adopting Delta’s Technology To Cement Manufacturing.” – Jeff Allison, President Of Delta Cleantech
