Delta's Success In Beijing!

Delta CleanTech hosted it's latest CO₂ Carbon Capture workshop in Beijing.

Delta's technology utilized to capture CO₂ was the focus of the workshop; specifically targeting emissions from industrial point sources such as natural gas processing, oil refineries, hydrogen production, cement plants, chemical productions and power generation.

75% of the attendees of the CO₂ Carbon Capture workshop participated in person, and the remaining attended online. Attendees consisted primarily of professionals from industrial and manufacturing companies, as well as from universities, government and research agencies.

Based on our early workshop successes, Delta will continue to host a series of CO₂ Carbon Capture workshops throughout 2022. Dates to be announced in the coming months.
